- 6. With respect to the ground handling gear, Rod stated a new and more detailed proposal is in process of preparation which will set forth the items proposed to be furnished, and the necessity for them, in greater detail. There are two additions over the old proposal. The first is a tent for shelter and a viewer for the 70 mm. material. Also a need will be present for a standard field processing unit at forward bases to handle larger film taken on experimental flights.
- 7. Rod stated his end of the program is going well and no major problems are visualized at this time.
